                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                   Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present nucleotide sequence, the coding region of which is also CC claimed, is that of cDNA encoding human 53010, a novel member of the CC carboxylesterase family. The invention provides 53010 nucleic acids, CC antisense molecules, expression vectors, host cells, transgenic animals, CC 53010 proteins, fusion proteins, antigenic peptides, anti-53010 CC antibodies and methods for detecting the presence of 53010 polypeptides cor nucleic acids, of identifying a compound that binds to the 53010 CC polypeptide, and of modulating the activity of the polypeptide. The 53010 CC polypeptide, and of modulating the activity of the polypeptide. The 53010 CC polypeptide, and polypeptides can act as novel diagnostic and CC therapeutic agents for controlling disorders involving aberrant or CC deficient hydrolysis of carboxylic esters. As 53010 molecules can cc expression is regulated in some rodent pain models, 53010 molecules can also act as novel diagnostic targets and therapeutic agents for CC controlling neurological disorders, such as pain-related disorders. A CC claimed method of treating or preventing a disorder (especially a pain-clated disorder) characterised by aberrant activity of a 53010 cc expression. 53010 mucleic acids are also useful in chromosome mapping, tissue typing, in forensic biology, prognostic assays, in CC and in obharmacoenomics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 2158
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 53010 nucleic acids, useful for diagnosing and treating e.g. vascular diseases, autoimmune diseases, or neurodegenerative diseases, as surrogate markers, in tissue typing and chromosome mapping.

disorder or identifying and treating a subject having a urological disorder.

The present invention describes the use of polypeptides related to compound capable of treating a urological disorder. Also described: (1) a method for identifying a compound capable of treating a urological compound capable of treating a urological compound capable of treating a urological compound; (2) a method for identifying a subject having a urological compound capable of treating a subject having a urological compound capable of urological disorders are useful for identifying a compound capable of treating a urological disorder, identifying a compound capable of treating a urological disorder, identifying a urological disorder. Disorders include urinary incontinence and benign prostatic compound capable of treating a urological disorder compound. The present sequence encodes a human urological disorder compound capable of treating a urological disorder compound. The present sequence encodes a human urological disorder compound prostation is used in the exemplification of the present

The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. T activity of polypeptides of the invention may be described as, cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropineuroprotective, immunosuppressive, haemostatic, antiinflammatory, cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorecti

nootropic, anorectic

The invention relates to an isolated human drug metabolising enzyme (DME) and its nucleotide. DME is useful for diagnosing, treating or preventing disorders associated with aberrant expression of DME, where the disorders immunodeficiency syndrome (AIDS), asthma, atherosclerosis, psoriasis, cirrhosis, hepatitis, and cancer; a neurological disorder such as acquired nyelisis, a cell proliferative disorder such as arteriosclerosis, cirrhosis, hepatitis, and cancer; a neurological disorder such as Alaheimer's disease, Huntington's disease, dementia, parkinson's disease, aneemia; an endocrine disorder such as renal tubular acidosis, epilepsy, anaemia; an endocrine disorder such as adenoma, thrombosis and infections; an eye disorder such as conjunctivitis, glaucoma, cataract; metabolic disorder such as conjunctivitis, glaucoma, cataract; metabolic disorder such as cystic fibrosis, diabetes and goitre; a gastrointestinal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               08-DEC-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 disorder such as anorexia, peptic ulcer; and liver disorders. DME is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. The invention is useful for creating knock-in humanised animals or transgenic animals to model human diseases in somatic or germline gene therapy, to generate a transcript image of a location due to translocation, inversion, etc. among normal, carrier or affected individuals, and as hybridisation probes for mapping naturally occurring genomic sequences. The present sequence is human DME-10 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 2232
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8

                                                                                                                                                                                                                                                                                                                                                                                   used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, autoimmune/inflammatory disorder, developmental disorders, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp polymucleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIFO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F; Harthshorne TA, Suchorolski MT, Altus CM, Pitts SJ, Elder LV, Mooney EM, Delegane AM, Panesar IS, Banville SC, Reddy TP; Stevens KA, Blanchard JL, Panzer SR, Wang X, Au AP, Gerstin Peralta CH, Anderson SB, Rioux P, Shen EJ, Wu MC, Stuve LL; Lagace RE, Spiro PA, Stewart EA, Wingrove J, Vitt UA, Kirton Xu Y, Kwong M, Policky JL, Hurwitz BL, Ma Y, Jackson JL, Gatury S, Shi X, Suarez CJ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be

                                       The invention discloses a polynucleotide comprising a sequence selected CC from 1970 fully defined nucleotide sequences which encode novel CC polypeptides. Also claimed is a polypeptide encoded by the polynucleotide CC or its partial peptide, an antibody binding to the polypeptide or peptide or the polynucleotide, immunologically assaying the polypeptide or peptide or peptide of the polynucleotide by contacting the polypeptide or peptide CC with the antibody of the encoded protein, and observing the binding CC between the two, a transformant carrying the polynucleotide in an CC expressible manner and an antisense polynucleotide. The oligonucleotide is useful as a primer for synthesising the polynucleotide, or as a probe CC for detecting the polynucleotide. The polynucleotide coded CC proteins are useful as pharmaceutical agents and many disease-related CC genes may be included in them, for developing a diagnostic marker or CC medicines for regulation of their expression and activity, or as targets CC regeneration. Membrane proteins, signal transduction-related proteins, concer, tumours for diseases (e.g. osteoporosis, curvalogical diseases, cancer, tumours The CDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The Sequence presented is a cDNA of the invention. Note: Some of the sequence code data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim

New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy. 'n

SEQ ID NO 736; 205pp; English.

The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

The polypeptides and polymucleotides are useful for diagnosing disease, and screening for potential therapeutic agents. The sequences are useful for treating metabolic disorders, cardiomyopathy, diabetes, hypertension, congenital heart defects, aortic stenosis, atrial septal defect (ASD), atrioventricular canal defect, ductus arteriosus, pulmonary stenosis, subaortic stenosis, ventricular septal defect (VSD), valve diseases, tuberous sclerosis, scleroderma, atherosclerosis, obesity, infectious disease, anorexia, neurodegenerative disorders, hatpainer's disease, Parkinson's disease, immune disorders, haematopoletic disorders, haemophilia, hypercoagulation, Crohn's disease and cancer. Sequences ABX72170-ABX72275 represent human NOVX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Guo X, Kekuda R, Miller CB, Malyankar UM, Spytek KA;

Human drug metabolizing enzymes, useful disorders associated with aberrant (DME) autoimmune disorders. in the diagnosis activity, e.g., and treatment cancer and 0£

Claim 12; SEQ ID NO 20; 142pp; English

This invention relates to novel drug metabolising enzymes (DME) and the nucleotide sequences which encode them. The invention may be useful for the development of compounds with a cytostatic, immunosuppressive, antiinflammatory, endocrine, ophthalmological, gastrointestinal or hepatotropic activity acting as an agonist or antagonist of drug metabolising enzyme activity. The invention may be used in the diagnosis and treatment of disorders associated with decreased or increased expression or activity of drug metabolising enzymes. Such disorders expression or activity of drug metabolising enzymes. Such disorders include cancer, cell proliferative disorders, autoimmune/inflammatory, metabolic disorders. The present sequence is that of a gene which encodes a human drug metabolising enzyme (DME) of the invention. Note: This sequence did not form part of the printed specification but was obtained in electronic format from EPO.

```

Claim 6; SEQ ID NO 3; 33pp; Japanese.

The present sequence encodes a cat cauxin protein (I) or its salt, which CC is cat kidney disease marker. Also described: (I) a partial peptide (II) cf (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) CC comprising (III); (4) a transformed host (V) comprising (III) or (IV); (5) producing (I) or (II) by culturing (V); (6) a antibody (VI) which CC couples specifically with (I) or (II); (7) diagnosing cat kidney disease CC which involves measuring (I) quantitatively, and where reduction of CC amount of (I) indicates presence of the disease; (8) a cat kidney disease CC diagnostic agent comprising (I) labelling agent, a reagent which measures CC the biological activity of urinary (I) or (VI); and (9) a cauxin CC cat kidney disease marker and (VI) is useful for diagnosing cat kidney CC disease. (I) enables detection of cat kidney disease simply and CC complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, CC complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, blood testing.

Sequence 2145 BP; 444 A; 581 C; 550 G; 564 T; 0 U; 6 Other;

                                                            The present sequence encodes a cat cauxin protein (I) or its salt, which CC is cat kidney disease marker. Also described: (I) a partial peptide (II) co of (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) (CC comprising (III); (4) a transformed host (V) comprising (III) or (IV); (CC couples specifically with (I) by culturing (V); (6) a antibody (VI) which (CC couples specifically with (I) or (II); (7) diagnosing cat kidney disease (CC which involves measuring (I) quantitatively, and where reduction of (I) indicates presence of the disease; (8) a cat kidney disease (CC diagnostic agent comprising (I) labelling agent, a reagent which measures (CC disease; (I) enables detection of (I) is useful as a cc disease (I) enables detection of cat kidney disease simply and (CC complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, cc block feating the formal rearring.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. The cactivity of polypeptides of the invention may be described as, convergence of the invention and metabolic. Polypeptides and polymucleotides of the invention are convergence of the invention are convergenced in the prevention of, cancer, convergenced of the invention are convergenced of the invention are convergenced of the invention of the inven
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20-DEC-2000;
